Teaching; informed and enriched by research

Andrew H Cobb

Emeritus Professor of Plant Sciences, former Dean of Academic Affairs and Director of Research, Harper Adams University College, Newport, Shropshire, TF10 8NB, UK.

Email: ahcobb@harper-adams.ac.uk
Assumptions

- Both teaching and research are core activities of a university education.

- It is the link between teaching and research that distinguishes higher education from other forms of education.

- All activities in a university are informed by the most recent developments in knowledge and understanding.

- Tensions exist between “research-intensive” universities, “research-informed” universities and “teaching-intensive” universities, on a national and international basis, centred on the meaning of research and its consequences.
Definition

Frascati (OECD, 2002)

Researchers are:

“Professionals engaged in the conception and creation of new knowledge, products, processes, methods and systems, and in the management of the projects concerned”.

i.e.
Not just as publications in journals, but a transfer of new knowledge to students, business and the wider community.
# The Research Continuum

<table>
<thead>
<tr>
<th>Activity of academic staff</th>
<th>How it underpins the curriculum</th>

</table>
What does linking teaching and research mean?

- **Learning about the work of others:** Understanding the findings of research and how this knowledge impacts on our understanding of the subject.

- **Learning how to do research:** The process by which new knowledge is produced, such as the scientific method, surveys, etc.

- **Inquiry-based research:** How research problems are identified and addressed.

- **Pedagogic research:** Reflecting on the learning process.

- **Impact of research:** An awareness of the importance and consequences of research findings to the wider community, including business.
Curriculum design to link teaching and research (Healey, 2005)

<table>
<thead>
<tr>
<th>STUDENTS AS PARTICIPANTS</th>
<th>EMPHASIS ON RESEARCH CONTENT</th>
<th>EMPHASIS ON RESEARCH PROCESSES AND PROBLEMS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Research-tutored</td>
<td>Curriculum emphasises learning focused on students writing and discussing essays and papers</td>
<td>Research-based</td>
</tr>
<tr>
<td>Research-led</td>
<td>Curriculum is structured around teaching current subject content</td>
<td>Research-orientated</td>
</tr>
</tbody>
</table>

TEACHER – FOCUSED STUDENTS AS AUDIENCE
What can a university do to strengthen the link between research and teaching?

- Make the link central to the mission of the university.
- Embed a culture of scholarship.
- Benchmark nationally and internationally.
- Fund staff development, to ensure that staff are up-to-date and active in their disciplines (e.g. Conference attendance).
- Personal research plans as a feature of annual review.
- Review promotion and reward criteria.
- Ensure the curriculum is informed by research with explicit use of references and examples.
- Review timetables; consider independent study weeks.
- Involve students in staff research.
Challenges

- International and national league tables.
- A publish or perish culture.
- Promotion prospects favour research.
- Funding constraints.
- Customer satisfaction; student surveys.
- Keep in touch with your students, not only by your graduate teaching assistants.
- Complacency and inertia (the “ostrich effect”!).
